Report to Partnership Meeting 10 November 2023

RESEARCH AND STRATEGY DELIVERY

SHARED SERVICES UPDATE PUBLIC TRANSPORT INFORMATION PROVISON

Purpose of Report

To provide Members with an update on the shared service model for co-ordinating the provision of public transport information across the HITRANS area.

Background

Since 2014, HITRANS in partnership with Local Authority colleagues have developed a shared service approach in respect of public transport information. A Public Transport Information Officer was appointed in 2015 with the responsibility for co-ordinating the provision of public transport information across the HITRANS area and in so doing improve both the quantity and quality of public transport information available to the public.

The supplier for the public transport information database has changed twice since 2015 with all five local authorities now using the DIVA system supplied by MENTZ (who provide the database for Transport for London). This contract was awarded in July 2020. Downstream data is provided to both Traveline Scotland and real time suppliers from the database including Vix who also manage all the real-time display assets across the HITRANS area. The database also produces automated static at stop information throughout the HITRANS area. The information is also now being used for other software providers such as the Ticketer back office and various apps including the HITRANS GO-HI MaaS platform.

The list below outlines the volume of stops for which wayside information is currently produced by area:

- Highland Council 1811stops
- Moray Council 319 stops
- Orkney isles Council 482 stops
- Argyll & Bute Council 687 stops
- Western isles Council 394 stops.

Work to improve the source information received from operators is being done in collaboration with the operators themselves and each local authority. This improvement is on an ongoing basis to ensure the output information received by the public is continually improving. We would encourage our Partner Councils to include conditions for supplying high quality public transport information in any new contracts as this helps both improve the accuracy of the information and reduces the need for manual editing of the data.

Status Update

The MENTZ system (DIVA) is being delivered to HITRANS by one of Mentz's existing clients National Public Transport Information (NPTI) on a subnet basis of their system which has allowed HITRANS to continue to provide a database within the current budget.

HITRANS officers have applied and secured funding for Smarter Choices Smart Places (SCSP) funding which has secured the continuation of the database provision and also allowed for the roll out of previously redundant real time signs in the Moray Council area. An element of the CnES Smarter Choices Smarter Places allocation has been used to install new battery powered real time displays.

Timetables have been processed and printed for Highland, Argyll and Bute and Moray over the past 5 months. Currently, production of displays for areas that have had no visible timetables such as for the routes 33a/c in Moray.

Training of several new staff on the system DIVA, has allowed HITRANS to deliver better progress on route creation and development. This secures a smooth operations when staff go on leave as a team of people are now trained on the different elements of the software.

A new version of DIVA has been released that has improve functionality and user interfaces. The Public Transport Information Officer has been trained on the new platform as well as supporting staff. It is important for local authority staff to have the opportunity to learn the upto-date version of the system and continue to use it on a regular basis to remain familiar with its functionality. Help sheets have also been circulated to aid staff when using the system and are constantly being updated when new features have been added, in addition to HITRANS staff and our Account Manager at National PTI being on hand to help when needed.

We have continued to have a strong relationship with the Data Development Manager at National PTI. This has allowed us to identify issues with the current build of DIVA and find solutions together both to help our progress of travel information but also to help develop the system to make it more accessible and easy to use.

We are currently working closely with the Moray Council on the incorporation of M.Connect routes in the database.

Real time information throughout the HITRANS area has been further enhanced with the implementation of the RTPI contract and infrastructure upgrades and configurations are now complete. A list of the 164 real-time assets across the HITRANS area is included within Appendix A.

One specific enhancement in respect of latest real time contract is that VIX can obtain electronic data directly from the operator. This enables a timelier display of real time information on street. An element of the CnES Smarter Choices Smarter Places allocation has been used to supply an additional 4 new battery powered real-time displays in the Western Isles. In addition ERDF Smart Cities funding has supported the purchase of 5 new real-time displays at the Fort William Bus station and Medical Centre, Inverness Airport Terminal building. A new display is also being installed at the new Inverness Airport Rail Station by Network Rail. New real-time displays have been installed in the Highland Council HQ building and in the main bus station in Inverness. Five additional battery powered displays are to be installed at Inverness Retail and Business Park / Inverness Campus including at the bus stops for the new Inverness Prison.

Data migration as a whole has been challenging over the last year for all involved. We would like to thank all our Local Authority colleagues for their work to keep us updated. There is currently a shared folder set up by The Highland Council where they submit all manual registrations to their allocated folder. Other LAs are still able to submit manual registrations directly via email to the Public Transport Information Officer.

Listed below are the contributions from each local authority for the provision of the shared service approach in respect of public transport information:

| Local Authority | Annual Contribution |
|---------------------------|------------------------|
| Argyll & Bute Council | £7,500 |
| Comhairle nan Eilean Siar | £5,000 |
| The Highland Council | £10,000 |
| Moray Council | £7,500 |
| Orkney Islands Council | £5,000 |

Staff Update

The permanent holder of the role of public Transport Information Officer was seconded to the role of Project Manager – Bus Partnership Fund for the Highland Bus Partnership Fund in 2021. Since this time HITRANS have appointed staff on a shortened term of contract to ensure continuity on delivery of the shared service. The nature of the short term contract has been a challenge and we have had the role fall vacant as staff have sought better job security with permanent roles.

As a result of the former permanent postholder securing a new role we are in a position where we can fill the role on a permanent basis again. HITRANS have advertised the vacancy and hope to have the post filled in November to continue to build resilience in the delivery of this Shared Service Programme. The terms and conditions of the role advertised are on the same basis as we had in place for the role during the period covering the Secondment but the appointment will be on a permanent basis ensuring greater security and improving project continuity.

Recommendation

Members are asked to:

- 1. Note this report.
- 2. To approve the appointment of a new Public Transport Information Officer on a permanent.

Risk Register

RTS Delivery

Impact - Positive

Comment – This work supports RTS objectives and the monitoring of their implementation.

Policy

Impact - Positive

Comment – This work supports the development of our Passenger Transport Policies (H33) in particular H33B to 'Develop high quality passenger transport user information and mapping

Financial

Impact - Positive

Comment – Cost savings as a direct result of this shared service approach

Equality

Impact – Positive

Comment – HITRANS support for improving public transport helps eliminate the barriers to travel for all and removes a number of physical accessibility barriers.

Report by: Robert Wilson / Ranald Robertson

Designation: Public Transport Information Officer / Partnership Director

Date: 26th October 2023
